

THE INFLUENCE OF THE COMPETENCE-BASED TRAINING ON THE  
EXPLICATION CHARACTERISTICS OF TEMPORAL PERSPECTIVE  
OF THE INDIVIDUAL

**Annotation.** *The authors of the article focus on the problem of identifying the relationship between methods of professional training and characteristics of temporal perspective of the individual. The connection between professional training and selected existential values is shown. The effect of the method of professional training on the characteristics of temporal perspective of the individual is identified. While analyzing in detail two methods of the professional training – «active» and «interactive», the authors prove that the prevalence of «interactive» techniques in the process of teaching helps to ensure that students are more focused on the situational problems of the day; the students, whose learning process was dominated by the «active» methods, tend to be positively oriented on self-development, which gives meaning to the present and the future.*

**Keywords:** competence-oriented approach, professional training, active learning methods, interactive learning methods, terminal values, temporal perspective of personality.
