
Evolution and ecology of the Universe: problem statement, methodological research

© G.I. Lovetskiy, N.A. Gavrikova

Kaluga branch of Bauman Moscow State Technical University, Kaluga, 248000, Russia

The Earth became the cradle of humanity by virtue of the evolution of the Universe and its objects – the Galaxy and Solar system. The existent environmental well-being, however, can be destroyed. To a large extent conservation of life will depend on engineering solutions of a completely new level. Knowing the laws of developing the technical systems and synthesis of sciences suggests philosophical and methodological research. The authors consider it as an important theoretical and practical problem.

Keywords: evolution of the Universe, environmental conditions, forming the objects, animate and inanimate matter.
