Bauman Moscow State Technical University, Moscow, 105005, Russia

The necessity of forming a wide range of algorithms of graduates' employability is one of the modern trends in labour market. The solution to this problem could be found by developing necessary competences of employability among graduates. This involves knowledge and skills acquisition in different fields of employability and mastering new methods of adaptation in labour market. Training graduates for the modern labour market environment is the aim and concern of any university, as "the level of graduates' employability" is one of the major criteria of its efficient work and competitiveness.

Keywords: *employability, youth labour market, methods of employability, adaptation in the labour market, transprofessional abilities, competitiveness.*
