The article proves the relevance of the analysis of science as a social and cultural phenomenon. A definition of science is given. Reasons for the steady increase of the role of science in the modern world are specified, the latest trends in science are highlighted. Different models of science development are compared, including alternatives: externalism and internalism. The set of sources of science development is considered, the author's position is justified and practical advices are given.

Keywords: science, science as a social and cultural phenomenon, models of the science, the sources of science development, externalism, internalism.
