Bauman Moscow State Technical University, Moscow, 105005, Russia

Modern society equipped with information technology provides an opportunity for people to solve many different problems together. This calls for joint efforts directly affects scientific research where, as one can easily notice, interdisciplinary study is gaining interest and importance. The headlong change in understanding of science calls for efforts on people's part to adapt to the change. Education is one of the most important factors of such adaptation, it provides a certain vantage point to see, explore and understand the world. To help people cope with challenges of the new information society it is advisable to reconsider traditional approaches to education.

Keywords: *personality, post-non-classical phase, information society, system of education, computerization of modern education.*
