
Social and philosophical aspects of contemporary engineering and technology training

© G.I. Lovetskiy

Bauman Moscow State Technical University, Kaluga branch,
Kaluga, 248000, Russia

We have conducted a social and philosophical analysis of the dominant trends in technological university evolution. The study shows that their future is determined by the main subject of science, which today starts to be dominated by life as the supreme object in the hierarchy of objects and phenomena studied by sciences. New education content means innovative engineering and technology training methods, based on theoretical and applied models of instruction.

Keywords: engineering and technology training methods, main subject of science, theoretical and applied models of instruction.
