We provide an option to possibly solve the problem of primary and secondary qualities, which is still unclear even after many centuries, based on the following: the concept of sensory cognition considered as a process possessing both imagery content and a symbolic form, the concept having been developed with the help of data obtained by specific sciences; the law of peculiar properties of sense organs; and the law of spatial sensory image projection. We suggest abandoning the concept of 'secondary qualities' and replacing it with an equivalent concept of 'symbolic elements of sensory images'.

Keywords: *primary qualities, secondary qualities, sensory modalities, image projection, symbolic elements of images.*
