The article proves the futility of the established in Russian sociology comprehension of the personality socialization within the framework of the general pedagogical paradigm. This paper presents the author's view on the socialization of an individual. We reveal the essence of the resource-based approach to the theory of the personality socialization in the context of understanding socialization as the process of organizing the internal structure of an individual by means of such concepts as the "socialization potential" and "socialization effect".

Keywords: socialization of an individual, internal structure of a personality, socialization potential, socialization effect, resource approach
