Bauman Moscow State Technical University, Moscow, 105005, Russia

The article considers the forecast of development of world economies for the next decades. Risks affecting the redistribution of forces and trends in the development of the modern world leaders are justified. The place and role of Russia in the world community in 2030 are shown on the basis of an analysis of key macroeconomic indicators. The conditions for the successful Russian economy development and the transition to an innovative development path are considered, i.e., diversification of the economy and exports, reduction of power consumption and competitive growth of enterprises, creating new innovation centers and educational clusters, implementation of the National Technology Initiative, the priority project in the field of education “Universities as centers of innovation space”.

Keywords: world ranking, nominal GDP, per capita GDP, features of the Chinese economy, features of the North American economy, scenarios for long-term development of Russia, new technological structure
