Bauman Moscow State Technical University, Moscow, 105005, Russia

The article regards the language role as the primary communication medium and also describes the interaction of cognition and language within the scientific investigation of linguistics and social philosophy. This process is the basis of person's social communication on various levels from the individual to the global one. Modern communication structure consists of diverse electronic-technical means but the priority belongs to language communication that increases knowledge and development of social reality.

Keywords: *language communication, social reality, consciousness, cognition, discourse, linguistics, social philosophy*
